

LUMINA

INNOVATION WINS AGAIN

Lumina Coatings International Inc. is proud to introduce our new line of professional grade rollcoaters.

The Lumina 6500 rollcoater has been developed to apply a smooth consistent layer of water borne liquid laminate to flexible substrates. The machine utilizes a specially designed application roller that has a unique finely grooved hardened surface. An adjustable doctor blade removes excess coating to ensure a constant thickness from 0.5 mil to 3.8 mil.

Features

- Drop down stainless steel coating tank
- Easy to clean with water
- Adjustable dual stainless steel feed rollers
- Removable stainless steel feed table
- Powder coated machine case and stand
- UL & EC approved motor
- 115 volt AC power. 220 volt models available upon request
